 - Claims 1-8, and 20-21 are now canceled.

Allowable subject matter

4. The pending invention is about a safety method by using a single vision sensor, which detects at least one object and generates at least one object detection signal, has a position with coordinates on a vehicle. A controller coupled to that vision sensor generates a safety system signal in response to coordinates and at least one object detection signal; said vision sensor is coupled to a signal processor for detecting objects for controlling motor vehicle adaptive cruise control, collision warning or countermeasure actuation, e.g. airbag or seatbelt pretension actuation, lane departure warning, lane keeping, and windscreen clearing etc. for an advantage of performing safety system operations traditionally performed through use of multiple vision sensors;

Art Unit 3661

enabling utilization of single vision sensor while providing accurate measurements for improved sensing system performance; enabling determination of object parameters without assuming actual size of target to estimate or determine range of target; minimizing number of sensors and sensing system components within the vehicle, and minimizing a sensing system complexity and manufacturing and maintenance costs.

Conclusion

- 5. Claims 9-19 are allowed; they are renumbered as claims 1-11.
